Reviews:

“Absolutely the best short film on the complexity and beauty of this new digital wonder called Bitcoin. The narration was incredible. I really like the educational part of this video and how Bitcoin will definitely be a force to reckon with considering its reach within the general populace. The creativity was spectacular. I even shared with friends that the narrator sounds like Peter Cullen as Optimus Prime from the Transformers movie. Just an all around professional movie that is objective and educational. I have shared this with as many people as I can and will be waiting for

more awesome productions. Definitely a keeper as a documentary. This movie was well thought out by the creators.” Written by luisedardon on IMDb.com.

“I was fortunate enough to see bits of the early trailers last year and was very much looking forward to this release. This film did not disappoint. It gives a very through explanation of the history of money which I found to be very informative.

This documentary is a must-see for everyone wanting a good history lesson in money, who want to learn about bitcoin, and see the possibilities with the future of crypto-currency.” Written by gabehiggins on IMDb.com.

“I really enjoyed this documentary. I liked that is firstly gets into the question about what is money and a short history of it. Then it goes on about how the actual system works and how money is being created out of debts by the fractional reserve system. From there we understand why bitcoin might be important in the future from now. Finally it explains what is bitcoin and how the whole system works. I felt that 1h long was a bit too short to cover the subject of money and bitcoin combined. On the other hand it was a very straight forwarded documentary. I strongly recommend this documentary to anyone who is interested in the concept of money and wants to understand what goes wrong with our current monetary system.” Written by deathsknight2 on IMDb.com
